WORK EXPERIENCE

core team member in flutter

Google Developer Student Clubs -Canadian International College

📅 Aug 2022 - current
- Selected as the top performing intern by the technology team
doing info sessions for flutter, record it and publish it online

flutter course online Udemy

course by Hassan Falih

📅 feb 2021 - may 2021
- dart principles
- flutter widgets
- provider, block state management
- firebase
- git version control
- responsive screens
MVC

online courses

gammal tech

📅 2019 - 2020
- c programing
- data structure
- algorism
- python

CAREER OBJECTIVE

I am a skilled Flutter mobile developer with over 4 years of experience. I have a strong foundation in programming languages such as C, Python, HTML, and CSS. I am also an intern at Alex Africa software engineering I have worked on various projects, including restaurant, e-commerce, and finance apps, as well as fitness, health, and exercise apps. In addition to my expertise in mobile app development, I have a strong background in graphic design, UI/UX design, and video editing. I am passionate about creating visually stunning and user-friendly designs that engage and delight users. I am currently studying geology at the Faculty of Science.

EDUCATION

Associate of Science Geology/Earth Science, General

Damnhour university

📅 Dec 2021 - current

SKILLS

- Firebase
- Object-Oriented Programming (OOP)
- Dart
- MVC

flutter course
gdsc damnhour

- Dart principles
  Flutter widgets
  Modules to handle Json firebase

online coursein web development foundation
fwd

📅 2021
- servers and network
  html, css, java script

PROJECTS

E-commerce app
with firebase backend

📅 Aug 2022 - current
- clean architecture, MVC, Provider for state management
- Login and sing up screen with firebase authentications and options to log with Facebook and Gmail
- Profile screen and home screen for view offer and new categories
- product details screen that can choose the size and amount and add to favorite
- payment screen and add to cart screen
- githup link:

Chat app
with firebase backend

📅 Aug 2022 - Sep 2022
- chat screen with stream of data coming from cloud firestore.
- profile screen that can change the photo, username and log out.
- welcome screen and landing widget to handle the log in and out state.
  sing up screen and log in screen.
- githup link:

- C(Programming Language)
- Flutter
- Python (Programming Language)
  Block Management
- clean architecture
- MVVM
  dio package
- Provider state Management
- git version control
- web scraping
- web view

Restaurant app
Postman API
📅 Nov 2022 - Dec 2022

- The app utilizes Postman API for secure and efficient communication with the back-end server, and Getx state management for maintaining a consistent user experience across the app.

- The app includes a home page, food details page, cat page, profile page, favorite page, and a payment page For storing user data, a local database is implemented, so user data will not be lost, even if there is no internet connection

- A beautiful splash screen, will be the first thing that users see when the app is launched, providing an attractive introduction to the app and giving users a smooth transition into the app's main features and functionality.

Dp Boss app

📅 feb 2023 - mar 2023

- splash screen , dashboard screen , chart screen , refresh button on the navbar, guesing screen , chat screen

- provider as state management

- web scraping to fetch data (Live result , all market) from the website using beautifulSoup and http and display it in the app

- web view with web scraping to display one element(chart) in the screen with web view

- chat screen with firebseFirestore to save the data (it should be withthe server for customers service)

- github link:

Freelance projects

- An auction app that I integrated Firebase, Google Maps, payment gateways, and Agora SDK into the auction app, Leveraging Firebase for real-time database management and authentication, Google Maps for precise location services, and payment gateways for secure transactions, I provided a seamless experience for users. Additionally, Agora SDK enabled smooth real-time communication during live auctions
  design link:

- Chat app with Firebase as the backend, enabling real-time messaging, personalized interests, and in-app purchases. Leveraging Firebase's robust features, including user authentication and real-time database management, Implementing personalized interest categories allowed users to tailor their chat experience, while in-app purchases enhanced monetization strategies. Additionally, group chat functionality and push notifications further enriched user engagement,
